SKILLS

Programming

Java

Generative AI & LLMs

LLMs · Prompt Engineering · Retrieval-Augmented Generation (RAG) · LangGraph · Multi-Agent Systems · Agentic AI · ChromaDB

Machine Learning

Model Training · Model Evaluation · PyTorch · TensorFlow · Deep Learning

Data & Streaming

Data Preprocessing · Data Pipelines · Kafka

Databases

MongoDB · ChromaDB

AI Engineer and 4× National-Level Hackathon Winner passionate about building innovative, real-world solutions with AI and technology. Experienced in building Agentic AI workflows, Retrieval-Augmented Generation (RAG) pipelines, deep learning models, and real-time streaming architectures.

EXPERIENCE

Freelance Web Developer

Self-employed · Ongoing

- Built responsive websites and web applications for clients from requirements gathering to delivery.
- Developed front-end interfaces and backend functionality using full-stack development practices.
- Managed design, implementation, hosting setup, debugging, and post-delivery fixes.
- Converted non-technical client requirements into clear scopes, timelines, and working software.

PROJECTS

Ascendo AI – Multi-Agent Business Analysis Platform

React.js · Vite · FastAPI · LangGraph · MongoDB · ChromaDB · JWT · Stripe · Docker

- Built a multi-agent AI platform with a Master Planner orchestrating specialized LangGraph agents for sales, marketing, lead generation, strategy, and customer success to produce business-analysis reports.
- Engineered FastAPI REST APIs with MongoDB, ChromaDB, JWT authentication, SSE streaming, and Stripe billing, paired with a React/Vite dashboard using Three.js, Tailwind, and Recharts.
- Containerized the full stack with Docker and structured the agent pipeline so new analysis agents can be added without modifying existing agents.

FinLog Monitor – Real-Time AI Log Intelligence Platform

Python · Pathway · Kafka · PyTorch · LLMs · RAG · FastAPI · Docker

- Built a real-time log intelligence platform ingesting trading, payment, and banking streams through Kafka into Pathway pipelines that normalize heterogeneous schemas.
- Developed a PyTorch anomaly detection engine over error-rate, latency, and volume windows, combined with LLM-based classification and root-cause identification to surface failures.
- Implemented RAG-powered incident assistance over runbooks and historical incidents, serving remediation guidance through FastAPI with Slack/email alerting and Docker deployment.

MeVo AI – Meeting Insights Generator

Machine Learning · Computer Vision · Chrome Extension · Real-Time Processing

- Built an AI assistant that joins Google Meet calls in real time and produces meeting insights, summaries, action items, and deadlines through a Chrome Extension.
- Added a multi-modal Computer Vision model for real-time sign-language gesture prediction from the video stream, supporting live accessibility use cases.

EDUCATION

B.E. in Computer Science and Engineering

PSNA College of Engineering and Technology, Dindigul, Tamil Nadu

CGPA: 8.14

HSC (Computer Science)

MSP Solai Nadar Memorial Higher Secondary School, Dindigul

Percentage: 84.16%

ACHIEVEMENTS

- **Top 1%** — Amazon ML School Hackathon
- **1st Place** — Algorithm Event & MindTwist Event, Science & Tech Festival, Dhanalakshmi Srinivasan College of Engineering
- **2nd Place** — Robovanta 26 Hackathon; Technical Quiz at Sethu Institute of Technology; PSNA CSE Intra-departmental Hackathon
- **3rd Place** — National Level Hackathon, EASA College of Engineering, Coimbatore
